

## Individual discussion, Ali Alladin – Week 8

### What do I want to learn or understand better?

This was the last sprint and when it comes to this course specifically there's nothing more I must learn for the project. Looking at the project now when it's completed, I can confidentially say that I have learned a lot during these weeks, both about the agile software project **management** process but also the technology we have used which both were very foreign to me at the start of this course. I will now try to

### How can I help someone else, or the entire team, to learn something new?

I have tried to use the method I mentioned in my first individual reflection to help my fellow teammates or the entire team learn something actively throughout the sprints. I personally feel that it has been a good method since I have shared the tutorials, I have found useful and the others have then in their own pace been able to go through them if they wish. I have of course also myself tried to explain and teach the group if there's something I have discovered while we were working or something I already knew from before and it can be challenging sometimes but it has also mostly been successful.

### What is my contribution towards the team's use of Scrum?

Just like all the previous sprints I did participate in the meetings with both the stakeholder, supervisor and then the sprint planning where we wrote user stories and planned the week ahead.

### What is my contribution towards the team's deliveries?

Since this was the last week and we were done with all the basic functionality we decided to fix small bugs and details which we had not been able to do during the past weeks. I worked together with Oliver and we made sure that the user of the application can't add negative time, time-reports can only be printed for courses with workshifts in them and lastly that the work shifts were sorted by date. Since we were done with our part quite early in the week I decided to improve the design of the application which was part of the initial plan but had low priority since our stakeholder valued the functionality more. I redesigned most of the application using the Bootstrap framework and was quite
