

## Individual discussion, Ali Alladin – Week 3

### What do I want to learn or understand better?

We have talked about that maybe in the coming weeks we should create some figures and diagrams for our application, e.g. UML-diagrams, ER-models, etc. I recently took a database course so the ER-models are quite fresh in my head, but I will try to repeat UML-diagrams a bit since I haven't made one of those in a while. I think the best way to do this will be to go through the basics by visiting some old course-page and skim through some slides.

### How can I help someone else, or the entire team, to learn something new?

Just like all the previous weeks I have tried to share insightful material I have found with the rest of the group. I have some previous experience working with some web-development (html/css/bootstrap) and I have tried utilizing this experience to the best of my ability so that it only doesn't show on the product but also that someone else can learn from it.

### What is my contribution towards the team's use of Scrum?

Our use of scrum hasn't changed a lot from last week. I of course did participate in the meetings with both the stakeholder and the supervisor and also took the minutes at those meetings this week.

### What is my contribution towards the team's deliveries?

This week's deliveries were completing three user stories and at the end of the week writing the team reflection. The user story I worked on together with Oliver was that the application should generate a pdf of the time-report. At the end of the week, we had completed all tasks and hence also the user story (considering that our stakeholder approves it on Monday). I also contributed to the team-reflection at the end of the week.
